ARTSA DATA

Changes in data reports

Issues

Improvements

New Data

Issues

- Under reporting of modern trailers
- Missing vehicles
- Edge cases in older vehicles

Under reporting of modern trailers

- Jurisdictions provide different and changing information
- Queensland no longer requires weight to be submitted
- Modern Queensland trailers for some brands have gone to 0

Under reporting of modern trailers

- New rules that will classify all these vehicles without needing the weight
- Improvements on classification rules for when more data fields are missing
- This will correctly classify most of those vehicles

Edge case rules

- Better classification of Rigid
- Better classification of Prime Movers

NT Trailers

- Expected around 5000 vehicles
- Have worked with State and National registration bodies to track them down
- Will now be present in reports

Changes

- Will update reports to have different figures as of next quarter
- Movement in all figures, as we apply new rules both back and with new quarters
- NT vehicles will cause a jump no matter what
- Thoughts?
